

What is claimed is:

1. A method for discharging a in-plane switching mode liquid crystal display panel having a color filter substrate, a thin film transistor substratem, and a liquid  
5 crystal layer therebetween, wherein at least one face of the liquid crystal display panel is discharged.

2. The method of claim 1, wherein the discharging of the liquid crystal display panel is performed by an ionizer.

10

3. The method of claim 1, wherein the discharged surface is a thin film transistor substrate.

4. The method of claim 1, wherein the discharged surface is a color filter  
15 substrate.

5. The method of claim 1, wherein the discharged surface is a thin film transistor substrate and a color filter substrate.
